**Risks of Investing in Closed-End Funds**

Risks associated with investing in closed-end funds generally include market risk, leverage risk, risk of anti-takeover provisions and non-diversification. In addition, shares of many closed-end funds frequently trade at a discount from their net asset value.

Underlying closed-end funds in which the Fund invests have additional fees, may utilize leverage, may not correlate to an intended index and may trade at a discount to their net asset values.
